

# WAVETREE PROTECT

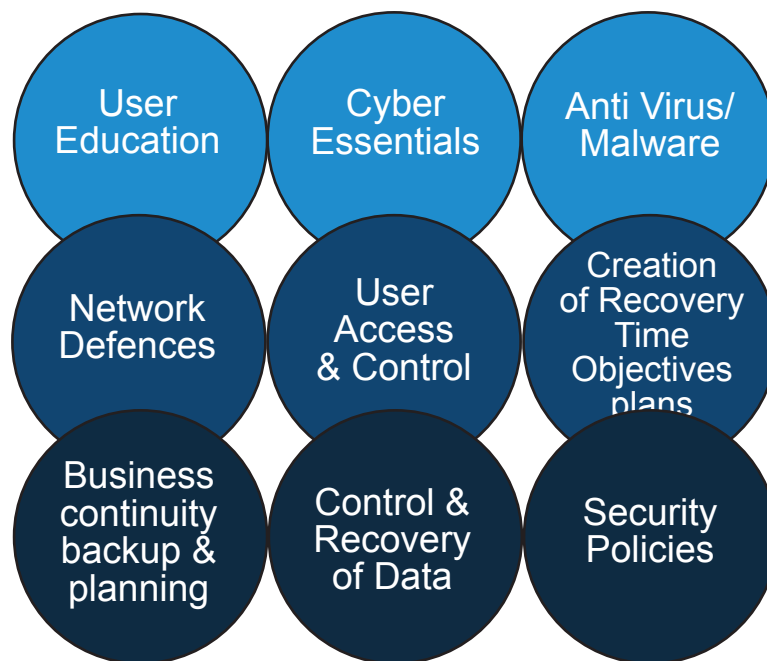

## Built to Protect Your Business

Introducing the next generation of hybrid cloud business continuity solution built for businesses of every size. The solutions are designed to protect your business, data and infrastructure against failure or cyber attack. Many businesses offer backup and recovery software, but the Wavetree Recovery Solution stands apart, with Wavetree Protect you are able to automatically with no intervention back up everything in your IT environment, and then recover to any machine, regardless of manufacturer, model, or necessary drivers.

At Wavetree, we understand the importance of securing and protecting your digital assets, which is why we launched the **WAVETREE PROTECT** suite of products.

### WAVETREE PROTECT Product Suite:

### WAVETREE PROTECT Business Continuity

Delivers fast and reliable backup and disaster recovery, by taking full pristine images of your entire infrastructure, allowing you to recover anything, anywhere at anytime, then storing onsite and offsite in your chosen location. Our market-leading technology is designed to protect any size environment, efficiently and with minimal operational cost.

### WAVETREE Restore

Enables you recover in minutes in the event of an emergency by pre-staging your local backups for standby fail over. Full site recovery available from data centre.

## WAVETREE PROTECT Verification

Using AES-256 encryption, Wavetree Protect shall automatically boot the server image via integrated technology, providing an email with attached screenshot of the System Login Screen to validate all backups. Data lifecycle is configured to occur on a daily, weekly, monthly or yearly schedule ensuring your backups are valid and can be restored every time.

Wavetree Protect stores your backups remotely within a secure data centre, so you're ready for the worst, enabling Wavetree to recover your vital data, and re-create your systems from our purpose built cloud for disaster recovery (DR) from a major disaster such as server loss or ransomware attack.

### Your WAVETREE PROTECT:

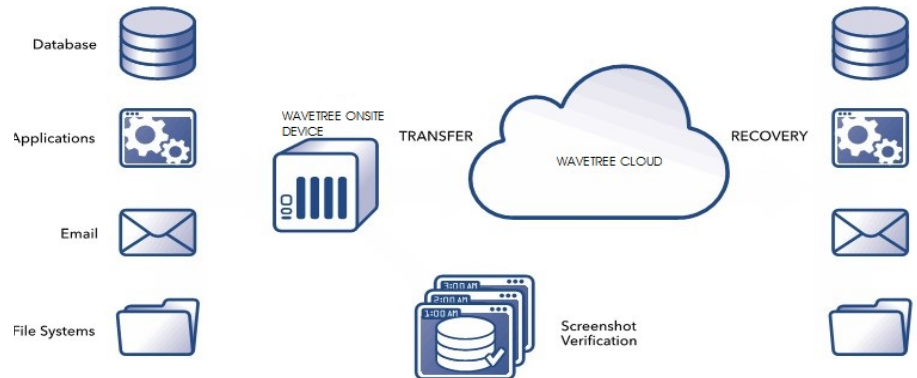

Customize your Wavetree Protect configuration to fit your business environment recovery objectives and budget with configuration options for:

- Data locations, onsite storage, cloud storage and offsite
- Low setup, management, and overhead costs
- Fully managed solution
- Time retention of data from 1 month to 7 years
- Control over your own cloud settings and recovery objectives
- Predictable monthly pricing

The solution includes hardware for onsite backup plus offsite cloud backup.

### WAVETREE Cloud Structure

All solutions are built with hybrid cloud functionality, providing quick restores and complete data protection.

### Instant virtualisation, On and Off-site

Backups can be virtualised locally to the device or to the secure cloud, instantly, with the click of a button. Should a local disaster occur, a business can continue as usual in the cloud. Even while virtualised, systems can perform a normal backup schedule to both the device and to the cloud.

### Hybrid Virtualisation

This is the combination of instant off-site virtualisation and the single click connectivity of instant local virtualisation.

### Screenshot Backup Verification

No more guessing if your backup is working properly. The device boots backups as virtual machines, capturing an image of the login page to give you visual proof that your data has been successfully backed up.

## Data Retention Policy

This proprietary technology eliminates broken backup chains. Each time a backup occurs data is converted directly into a virtual machine, with the most recent backup image always being the base image. Data is always available immediately, both on and off-site.

## Centralised Management

All solutions are controlled through a central, easy to use web interface. Your provider can configure devices, schedule backup reports, monitor off-site amounts, set up alerts, access marketing support, and more.

## End-to-End Encryption

All data is protected by AES 256 encryption both in transit and in the cloud. You have the option to encrypt data locally, and pass phrases can be specified per appliance or per protected machine to meet compliance regulations.

## Better Bare Metal Restore

Restore full machines quickly and efficiently through our USB Bare Metal Restore process. Go from physical machines to virtual (P2V) or vice versa with our unique dissimilar hardware tool that allows for maximum flexibility when restoring. No drives or cables needed as the system can run completely over the user's network.

## Broad Operating System Support

Devices Support Microsoft Windows operating systems for almost any Windows PC or server that is still production today. Support currently ranges from Windows 2000 to Windows 8 and Server 2012. Granular recovery is also available for Exchange and Sharepoint servers.

## About WAVETREE

WAVETREE is the provider of hybrid IT solutions for your entire business including WAVETREE PROTECT which is a suite of products to protect and secure your critical business data.

The WAVETREE product line is comprised of IT support services, Helpdesk, Hardware & software procurement, cloud services, transition to the cloud services, project design, delivery and management and the suite of products for WAVETREE PROTECT which address's the needs of business of every size, with unique feature sets including instant local and off-site virtualisation, Screenshot Backup Verification, Inverse Chain Technology, and End-to-End Encryption.

WAVETREE sell the solutions to a wide range of vertical markets including: small business, healthcare, financial, education, banking, legal, manufacturing and charity organisations.
